That's because you need a tool that works smoothly on Android.Although the idea of using most free VPNs is very tempting, it is also a fact that they aren't completely safe and secure. A CSIRO research discovered that as much as 38% of Android VPNs on the Play Store had been secretly injecting malware onto users' devices.Moreover, various VPNs claim to be the best free VPN for Android, but equip multiple technical and security flaws, request permissions to run intrusive ads, and don't even hide users' IP addresses.This is why we highly recommend subscribing to a premium Android phone VPN if you want complete anonymity, privacy, and access to streaming content.But, if you're looking for the best free VPN for Android, this guide is exactly what you're looking for. We tested multiple best free VPN apps on my Samsung Galaxy Note 20. Unfortunately, after our testing, we were able to find only ten free VPNs for Android that are safe to use in 2022.Quick Overview: Best Free VPN for AndroidHere is a list of the top 9 best free VPNs for Android:ExpressVPN – Best Android VPN with a 30-Day Money-back Guarantee – Offers thousands of servers to stream and torrent with fast speeds. Offers top-notch security features for securing your Android device from cyberattacks. Moreover, you can try out the VPN for a month risk-free.Windscribe – The Best Free VPN for Android – Equips VPN servers in 10 countries, 10 GB/month bandwidth, unlimited multi-logins, no-logs policy, and a straightforward Android app. It is the best free VPN for Android you can get in 2022.Hide.me – Secure Free VPN for Android – A reliable choice for streaming and torrenting due to IP leak protection and kill switch, but offers only five server locations and 10 GB/month bandwidth.ProtonVPN – Totally Free VPN for Android – Unlimited bandwidth and decent security features, but offers servers in only 3 locations.TunnelBear – Free Android VPN with Smooth App Experience – Super user-friendly app for Android along with 49 server locations, but comes with 500 MB/month bandwidth only.4 More Free VPNs for AndroidDetailed Analysis of the Best Free VPNs for Android – [2022]After extensive research to find out the best free VPN for Android, we have compiled a list of top-rated options that can make your online activities safe from the eyes of trackers, hackers, and cybercriminals:1. ExpressVPN – Best Android VPN with a 30-Day Money-back GuaranteeKey Features:3000+ servers in 94 countriesAES 256-bit encryption and DNS/IP leak protectionCompatible with Android versions 5.0 or later5 simultaneous connectionsRisk-free 30-day money-back guaranteeSpeeds: 89.38 Mbps on a 100 Mbps connectionExpressVPN is the best Android VPN due to its best-in-class mobile VPN performance and support for Android phones and tablets. While the VPN is not entirely free, it offers a risk-free 30-day refund policy, so you can try the VPN out and enjoy its premium service easily for a month.This VPN is compatible with Android 12, 11, 10, Oreo, Nougat, Pie, Lollipop, and Marshmallow. Moreover, it offers a multi-lingual interface. This means that you get ExpressVPN's Android app in 16 different languages, including Italian, Japanese, Korean, Dutch, Polish, Swedish, and more.ExpressVPN has a VPN server network that consists of 3000+ VPN server locations in 94 countries. With a widespread network, free users can easily bypass ISP throttling to get blazing-fast speeds along with unlimited, unrestricted, and uninterrupted access to various geo-restricted content from around the globe.For security and encrypted connection, ExpressVPN relies upon a strict zero-log policy, military-grade AES-256-Bit encryption, and various additional security features such as TrustedServer Network and Private DNS. ExpressVPN's kill switch is also available on Android by the name Network Protection to ensure that the users' online security and privacy aren't compromised.We tested this feature and it worked great!Moreover, ExpressVPN also protects against Log4Shell vulnerability. In case you're wondering what this vulnerability really is, Log4Shell is dubbed as the "bug that is breaking the internet" and has been given a security rating of 10 out of 10. ExpressVPN is the only VPN provider that has tapped into this area and brought you a proven solution to protect your devices from this notorious vulnerability.Using ExpressVPN on Android, you can not only enjoy complete privacy but also stream all your favorite TV shows and movies from worldwide. ExpressVPN unblocks HBO Max, Disney+, Netflix, Hulu, Amazon Prime, DAZN, and various other streaming platforms.The service is easily compatible with popular Android phone manufacturers such as Samsung Galaxy, Nokia, Huawei, Sony Xperia, LG, Motorola, Google Pixel, BlackBerry, and HTC.If you can't find ExpressVPN's app on your Google Play Store, you can easily download ExpressVPN's APK file. In case you can't find the page, just contact ExpressVPN's 24/7 live chat support for assistance.Although it costs $6.67/mo (Save 49% and get 3 extra months FREE with 12-month plan), it does come with a reliable 30-day refund policy which makes ExpressVPN the best VPN for Android.To learn more about this provider, check out our ExpressVPN review.ProsBlazing-fast speed on all serversSleek app for AndroidUnblocks HBO Max, Netflix, and other streaming platformsOffers .apk file for devicesNo IP leaks or collection of user logsServers in 94 countriesConsSmall duration subscription plans are slightly expensive2. Windscribe – The Best Free VPN for AndroidKey Features:Servers in 10 countriesAES 256-bit encryption and DNS/IP leak protectionCompatible with Android versions 4.1 or laterUnlimited simultaneous connectionsSpeeds: 52.17 Mbps on a 100 Mbps connectionNo-logs policyWindscribe is the best free VPN for Android phone offering free VPN servers that allows you to conduct faster browsing, save your mobile data by circumventing ads and malware tracking, and keep your Android phone's internet activity hidden from your internet service provider.It supports Android versions 4.1 or above and also offers a .apk file in case you face any technical errors while installing Windscribe on your Android phone/tablet. In addition, its Android app is easy to use and lightweight, so it will not affect the overall performance of your device.Windscribe offers servers in 10 different countries to access geo-restricted content. But, its free version comes with a 10 GB monthly limit which isn't a lot, but you can stream about 15-20 minutes per day in SD quality, which supports torrenting in only 2 locations (Switzerland and Netherlands). However, with its fast servers, you can easily call it the fastest free VPN for Android.Windscribe's app is feature-packed and all set to be used.Windscribe uses an AES-256 cipher with SHA512 and a 4096-bit RSA key for data encryption, so there is zero chance of your data being intercepted and decoded during any cyberattack. It also offers split tunneling so you can use a VPN-enabled connection and your regular IP address together on the same device.Moreover, Windscribe offers a few features that you don't get with a few premium VPNs as well. If you're a torrent fan, then you may get port forwarding support with Windscribe. As for static IP, you only get them as a paid add-on.To learn more about this provider, check out our Windscribe VPN review.ProsUser-friendly app for all Android devicesUnblocks Netflix and other streaming platformsNo payment details or credit card requiredUnlimited multi-loginsCons10 GB per month onlyUnable to unblock American NetflixLive chat support has automated messages3. Hide.me – Secure Free VPN for Android Key Features:Servers in 5 locations10 GB data per monthKill switch and no-logging policyP2P connectionsSingle device connectionSpeeds: 50.12 Mbps on a 100 Mbps connectionHide.me is the best secure free VPN for Android that keeps you safe and unidentified on your Android device through its multiple security features. It even offers a strict no-logging policy that a third-party firm has independently audited.This VPN works great on Android. The app is dark by looks and super-smooth to use. You can easily get it from the Google Play Store or get this free VPN for Android's apk file to download.Hide.me's free version offers five server locations (Singapore, Canada, Netherlands, US East, and US West) and a 10 GB monthly free data limit. It provides the ability to bypass any form of geo-restricted content, including various popular streaming platforms such as Netflix, Hulu, Disney+, and Amazon Prime Video. This will translate to about you want to use Hide.me with services such as YouTube TV.We highly recommend opting for the OpenVPN protocol.It supports a zero-log policy and essential security features such as AES-256-Bit encryption, Split Tunneling, Stealth Guard, Advanced IP Leak Protection, IPv6 Support, and the popular VPN connection protocols.As we said earlier, Android free users will get a bandwidth limit of 10GB/month with the free plan.For a more detailed evaluation, check out our Hide.me review.Pros10 GB of data per month5 server locationsUnblocks YouTube TV onlyConsWireGuard is unavailable on the free versionThe free version doesn't work with NetflixWireGuard is not available on the free plan4. ProtonVPN – Totally Free VPN for AndroidKey Features:Servers in 3 locationsAES 256-bit encryption and no-logging policySplit tunnelingSupports P2P connectionsSingle device connectionSpeeds: 44 Mbps on a 100 Mbps connectionProtonVPN is the best and totally free VPN for Android as it offers unlimited bandwidth, like premium VPN services. It holds almost the same reputation among free virtual private networks that ExpressVPN holds among the best premium VPN providers.ProtonVPN is intuitive, offers many useful features, and keeps you secure and private when surfing the internet.Its free version only has three server locations, including the United States, Netherlands, and Japan. It is among the few best cheap VPNs that offer unlimited free data. But the good thing is that its Netherlands server can be used to unblock torrent websites and download files securely without worrying about getting caught.While its Android app is feature packed, it only offers 3 server locations on the free plan.The Android application offers secure VPN features that redirect your web traffic on multiple servers to add an extra layer of protection, a VPN kill switch feature, and an ad-blocker called NetShield. Its Alternative Routing feature allows you to access the service even when its servers are blocked.Unfortunately, its free version doesn't support Netflix and other streaming services. You'll have to upgrade to the paid version for that. But, overall, ProtonVPN is very good for Android users looking to enhance their web privacy.To find out more, check out our detailed ProtonVPN review.ProsAES-256-Bit encryptionHeadquartered in SwitzerlandKill switch and DNS protectionSecure Core serversSupports torrentingConsOnly three server placesInsufficient customer supportProne to VPN blocks5. TunnelBear – Free Android VPN with Smooth App ExperienceKey Features:Servers in 49 locationsAES 256-bit encryption and no-logging policy500 MB per monthSplit tunneling5 simultaneous connectionsSpeeds: 39.12 Mbps on a 100 Mbps connectionTunnelBear is among the top free VPNs out there, offering a user-friendly Android app. It has the most intuitive and easiest free VPN app for Android devices with a simple design that even a bear can use, a user-interactive map for server selection, and an Android widget.Its free version comes with only a 500 MB monthly free data limit, but it makes up for it with its network of 49 free VPN server locations. In addition, if you tweet about TunnelBear or refer it to a friend, you can receive 1 GB of additional bandwidth for free.The Android application has an Always-on feature, which automatically connects you to an active server after you get disconnected from your previous server. It also offers a kill switch called VigilantBear, which blocks all your internet traffic if it becomes unstable for any reason.Once you enable it, you can freely access the internet without any risks.Although TunnelBear is bliss to use because of its apps, if you're into heavy streaming or downloading, you can easily run out of your monthly limit, which can be a bit annoying. Therefore, this VPN is useful as long as you use it very sparingly, such as when you perform activities where privacy is paramount or want to protect your internet traffic.TunnelBear also offers a feature called GhostBear that can bypass firewalls and VPN blocks. Apart from Android, Windows and tunnel bear is now also compatible with Linux operating systems, allowing it to join the list of best free VPN providers for Ubuntu.Check out our TunnelBear review to learn more about this provider.ProsUser-friendly VPN serviceUnblocks Netflix USAES-256-Bit encryptionWide server networkZero-log VPNCons500 MB monthly limitInsufficient customer support6. Atlas VPNKey Features:Servers in 3 locationsPrivateDNS and no-logging policyUnlimited bandwidthSplit tunnelingUnlimited simultaneous connectionsSpeeds: 40 Mbps on a 100 Mbps connectionAtlas VPN is another free VPN you can use on your Android devices. It is simple, free, and easy to use.In addition to that, the free version offers 3 free locations, no speed limits, and the ability to use one account on unlimited devices. Speaking of servers, it allows you to connect to the Netherlands (Amsterdam), the United States (Los Angeles), and the United States (New York).Sadly, the VPN only offers 3 server locations to connect to.As for security and encryption, Atlas uses AES-256 and ChaCha20-Poly1305 encryption. What we love about this free VPN for Android is that it is fast enough for 4K streaming and torrenting. If the VPN connection fails, you'll also have a kill switch to protect your anonymity.However, remember that it has a monthly restriction of 10GB, so if you want to stream or download a lot of data, you should consider the paid version. Meanwhile, the complete premium Android version includes tracker blocking, a data breach scanner, and access to 700+ servers across 31 countries.Overall, if you want access to all the premium features, consider opting for the paid version of AtlasVPN.ProsWeb filtersWireGuard protocol2FA login featureConsBased in the US (5 eyes)Only 3 server locations in the free version7. Hotspot ShieldKey features:1 server location in the US onlyAES 256-bit encryption500 MB/month limitFreemium ServiceSingle device connectionSpeeds: 41.25 Mbps on a 100 Mbps connectionHotspot Shield is another best and fast free VPN for Android. However, its free version only offers a 500 MB/month limit and a single server location automatically assigned by the application.The provider's headquarters is located in the US, and it relies on its own created Catapult Hydra protocol to secure its users' privacy. Unfortunately, the provider doesn't offer other popular VPN connection protocols such as OpenVPN, SSTP, IKEV, and L2TP/IPsec, which is quite a drawback.Sadly, the VPN only offers a single server location – the US.With its headquarters in a 5 Eyes Alliance country, there are few concerns about online privacy and security, even if the provider confirms that it doesn't store any VPN connection logs.Hotspot Shield VPN's premium plan offers unlimited bandwidth, AES-256-Bit encryption for complete privacy, 24/7 live chat support, and a 45-day refund policy for its users on Android devices.To learn more about this provider, check out our Hotspot Shield review.ProsAES-256-Bit encryptionAd-malware protectionWi-Fi protectionCatapult Hydra protocolCons500 MB/month data limitSingle server location8. SpeedifyKey Features:50+ servers in 35+ countriesAES 256-bit encryption2 GB bandwidth per monthChannel Bonding Protocol5 simultaneous connectionsSpeeds: 45 Mbps on a 100 Mbps connectionSpeedify operates a network of 50+ servers in 35+ countries. So, Speedify is not your average run-of-the-mill VPN. Well, to be fair, it's more of a channel bonding tool than a full-fledged VPN. All in all, it is another best free VPN you can go for.Speedify's headquarter is also located in the United States, but it does reassure complete privacy with a no-log network and ChaCha 256-bit Encryption. This encryption mechanism is supposedly way harder to crack than the usual AES-256-Bit encryption found in almost every VPN. If we talk about protocols, Speedify uses DTLS 1.2 as its primary transport security protocol.The image shows that it does offer a bunch of great security features to choose fromIt also offers an internet kill switch and Speedify's channel bonding – a self-developed protocol that works by combining all network connections such as Wi-Fi, cellular, and Ethernet simultaneously to offer a seamless and refined network connection.Based on our testing, it is quite stable. With its channel bonding technology, it manages to offer better stability than any other VPN on the market.While this service easily cleared every IP/DNS leak test, its free version failed to unblock Netflix and other popular streaming services like BBC iPlayer, ITV, Hulu, and Amazon Prime Video.Currently, the service is compatible with all the leading platforms like Windows, Mac, Linux, Android, and iOS.To learn more about this provider, check out our Speedify review.ProsAES-256-Bit encryptionSupports torrentingChannel bondingCons2 GB/month data limitFrequent disconnection issues9. KasperskyKey Features:Connect to the closest server availableAES 256-bit encryption200 MB bandwidth per dayNo-logs policy1 device connectionSpeeds: 42.38 Mbps on a 100 Mbps connectionKaspersky is the final solid free VPN for Android. It's a small Russian VPN provider that offers a generous free version for individuals who don't want to pay for a premium VPN.Download the free version of Kaspersky, and you'll get 200MB daily. As for servers, unlike other free VPNs, Kaspersky will only connect you to the closest server available. With the paid version, however, you get access to the fastest servers in 30+ countries.Millions trust this VPN. After all, Kaspersky is known to be a premium Antivirus solution. It even has a global Google Play rating of 4.4 out of 5.0.Overall, the VPN is great, however, 200MB per day can be a bit annoying for heavy users. But for general browning, it is a great option. It features IP address masking and Zero activity logs. Moreover, it ensures that cybercriminals do not intercept your data.We could navigate through its Android app without any issues.There are also a few other issues with the free version. For example, kill switch is only offered in the paid version and the free version is also incapable of accessing the US and UK Netflix. In addition to that, Kaspersky free can only be used on one device.ProsSimple interfaceKeeps no logsTrusted by millionsConsOnly allows connection to the closest serversLacks a kill switchSlow speed test resultsTesting Methodology: How to Choose the Best Free VPN Service for Android?All of the free VPN services that we've listed in this guide have been extensively tested. But if you want to choose a virtual private network for yourself, here's what you should look out for:Data cap – You need to check how much monthly data cap the VPN offers and if it is enough for your requirement. The minimum requirement is 10 GB per month of data.Security – When choosing a VPN, make sure it offers AES 256-bit encryption which is the standard these days. Anything below 256-bit cipher is not acceptable. Also, ensure the VPN offers the latest security protocols and a no-logs policy.Fast Speeds – Just like data caps, download speeds also greatly impact a VPN's performance. Therefore, you need a VPN that offers fast speeds to stream or torrent without lag.Trustworthiness – Ensure that the VPN does not contain any malware, so your Android device remains safe.Servers – You need a vast variety of servers to access content from all across the globe. You can unblock geo-blocked content with multiple servers from any country you prefer.Compatibility – Not all free VPNs offer apps for Android. Therefore, ensure the free VPN you choose offers a bespoke app for Android devices. It's best if the app has a simple layout and all the features are easily accessible.Customer Support – A VPN you select should also offer reliable and effective 24/7 customer support for immediate technical assistance.How to Set up a Free VPN on an Android Device?Here's how to set up a free VPN service on your Android device:Look for a free VPN on Google Play Store (We recommend Windscribe).Open the Settings app of your phone.Click on Network & Internet and then VPN (If you're unable to find it, search "VPN." If you still can't find it, ask your device manufacturer for help).Click Add + present at the top-right corner.Insert the details from your administrator.Click on Save.Here is a comparison table to help you determine the best free VPN for Android 2022:VPNsJurisdictionThe British Virgin IslandsCanadaSwitzerlandMalaysiaCanadaUnited StatesCanadaUnited StatesRussiaSecurityAES 256 BitAES 256 BitAES 256 BitAES 256 BitAES 256 BitAES 256 BitAES 256 BitAES 256 BitAES 256 BitAES 256 BitData Usage LimitUnlimited10 GB/moUnlimited10 GB/mo500 MB/mo500 MB/mo500 MB/mo2 GB/mo200 MB/dayServer Locations3000+ servers in 94 countries10 locations3 locations (USA, Netherlands, and Japan)4 locations (US, Canada, Singapore, Netherlands)Over 23 locations2000+ servers in 16 countries1 location50+ servers in 35+ countriesClosest server availableSimultaneous connections511115111StreamingNetflix, BBC iPlayer, Hulu, and MoreNetflix, BBC iPlayer, HBO.YouTube, and KodiNetflix Canada, YouTube, HBOYoutube, Kodi, and moreNetflix, BBC iPlayer, Hulu, and MoreNetflix Canada, YouTube, HBOYouTube, and KodiNetflix, YouTubeAndroid compatibilityAndroid 11, 10, Pie, Oreo, Nougat, Marshmallow & LollipopAndroid 11, 10, 9, 8, and 7Android 11, 10, Pie, Oreo, Nougat, Marshmallow & LollipopAndroid 11, 10, 9, 8, 7, 6, and 5Android 11, 10, Pie, Oreo, Nougat, and MarshmallowAndroid 11, 10, Pie, Oreo, Nougat, and MarshmallowAndroid 11, 10, 9, 8, 7, 6 and 5Android 11, 10, Pie, Oreo, Nougat, and MarshmallowAndroid 5 and aboveRead MoreExpressVPN ReviewWindscribe ReviewProtonVPN ReviewHide.Me ReviewTunnelBear ReviewSurfEasy ReviewHotspot Shield ReviewSpeedify Review–More InfoVisit SiteVisit SiteVisit SiteVisit SiteVisit SiteVisit SiteVisit SiteVisit SiteVisit SiteVisit SiteWhy Do I Need a Free VPN on my Android?Free VPNs are not just for computers. With it, you can also mask your location on your Android device. Whether you desire to bypass geo-blocks for your favorite streaming platform or require extra security on your device while using a public Wi-Fi network, a free VPN can help you throughout.Using a VPN is an excellent way to protect your security and privacy. Let's look at a few reasons why you need a free VPN for your Android:With the best free VPN for Android phone/tablet, you can encrypt your web traffic.A free VPN will keep you unidentified, so your ISP and other people cannot see your online activities.It prevents you from being vulnerable on public Wi-Fi.No third party cannot determine your true location.With a free VPN, you can also bypass censorship and access geo-restricted content.If you're going to get a free VPN service, then you should be aware of a few risks that are related to free services, such as the following:Free VPNs are infected with viruses and malwareThese VPNs can embed trackers for multiple purposesFree VPNs cannot unblock geo-restricted contentThey might slow your connection downWant us to go through the topic thoroughly? Let's go:1. Substandard securityFree VPN services often neglect to use modern encryption and tunneling protocols and secure VPN tunnels, leaving free users exposed online. Protection is the essential function of VPNs, so if a VPN can't even ensure your security effectively, it certainly can't be relied on for anything else either.Most free VPNs log user data and sell it to third parties meaning your privacy is compromised, and private information is exposed to advertisers. Similarly, free VPNs also don't use industry-standard encryption protocols for data protection.2. Bandwidth limitSince free VPNs aren't charging users anything, they have to enforce data transfer limits to serve many users equally. They offer a few free servers. Therefore, you will have to bear bandwidth limits with 99% of free VPNs or Android VPN apps.3. Device compatibility:Free apps generally only support a single simultaneous connection, unlike paid VPNs that support simultaneous connections on various devices. So if you need to use a VPN on multiple devices, then a free Android isn't going to be much help.4. Malicious Ads:Various free VPNs display multiple advertisements to earn money. However, this may be annoying and quite dangerous. Free VPN services display malicious pop-ups and advertisements without any concern for the safety of users. This way, they can inject any kind of malware on your Android device.5. Selling Data:While premium VPNs like ExpressVPN won't sell your data to the higher authorities due to their no-logs policy, a free VPN might do the complete opposite. This can be quite dangerous if you're in a restrictive country like China, where any information leak can get you arrested.6. Trackers:While the primary purpose of a VPN is to keep you anonymous, a free VPN will most likely install a tracker into your system so that they can keep an eye on your search queries, location, and personal details. Free Android VPNs to Avoid With so many free VPNs available, various can be malicious to your privacy. Here are the most notable free Android VPNs that free VPN users must avoid:1. Hola VPNAmong the top free VPN apps, Hola is a hugely popular VPN app for Android that is free of cost. Unfortunately, many users don't know that this app uses a peer-to-peer system because it can't afford an actual VPN server network.This means another Hola user can acquire your real IP address and do anything they want. So, if anyone performs illegal activities, the user may face legal consequences because authorities might use that IP address to track them. Hola was also found to sell user bandwidth for botnet attacks, which is a huge red flag. For these highly suspicious facts, Hola VPN is an app best avoided by Android users who prefer an encrypted connection.2. SuperVPNSuperVPN has over 50 million downloads on the Google Store but has a highly ambiguous, almost cryptic privacy policy. In one passage, SuperVPN explicitly states: "We keep all information on highly secured servers based in the United Kingdom and the USA. All information might be transferred to other servers we could use, and we will take reasonable care with these possible transfers."If you value your privacy and anonymity, then avoid using SuperVPN on your Android device at all costs.3. TouchVPNThis is another free VPN available on the Google Play Store. However, while it looks like a free VPN, there are constant intrusive ads that pester you along with multiple in-app purchases. Users also added a few technical flaws to their TouchVPN, which makes this VPN a no-no. Let's not forget that the VPN also has privacy issues, including the collection of identifiable data.4. BetternetBetternet is a free Android VPN that has over a million reviews. However, the VPN takes advantage of its users by collecting identifiable data, such as your IP address, and selling it to third-party advertisers.FAQsYes, ProtonVPN is an absolutely free VPN for Android since it doesn't come with any data cap, while various other VPNs have a 10 GB limit per month.Following are the five best free VPN services for Android:ExpressVPNWindscribeHide.meProtonVPNTunnelBearWhile free VPNs do come with multiple limitations, it's still a better option to get a free VPN than leaving your Android device without any protection. A free VPN will offer you sufficient data, multiple famous locations to connect to, and some security features like AES 256-bit encryption and a kill switch.Yes, you can download a free VPN for Android. Windscribe is a free VPN service that offers stable servers and a fast connection. You can unblock your favorite streaming platforms, improve gaming, and stay unidentified over the internet. Download the best free VPN for Android immediately to enjoy a safe, private, and fast connection.Amongst all free VPNs, TunnelBear has the most servers – available in 49 countries. But, it only offers 500 MB per month. So, if you're looking for a VPN that offers a vast variety of servers and overall amazing service, then you need to opt for ExpressVPN.A free VPN works in the same way as any other OS. Your internet traffic will be routed through a VPN server and then to your destination site. Using a free Android VPN will mask your IP address and replace it with the VPN server you connect to.This means that your online activity will stay hidden until the VPN runs on your Android, and your IP address won't be leaked.Bottom LineFinding the best free VPN for Android is a tricky business. With many VPNs turning out to be scams and capable of leaking private information of Android users, it pays to be careful when searching for one.Upon our comprehensive testing, we discovered Windscribe to be a completely free VPN for Android with a Play Store rating of 3.9/5.0, 10 GB/month bandwidth limit, 93 Mbps speed on a 100 Mbps internet connection, and compatibility with Android 4.1 or later.However, for the most optimized and ultimate security, privacy, data protection, and unblocking capabilities on Android devices, we suggest subscribing to a paid VPN provider such as ExpressVPN. You can purchase its "12 months + 3 months" subscription for a limited time, which comes with a 30-day money-back guarantee.Below you'll find a quick comparison between the multiple free VPNs so you can easily select the best VPN provider free VPN for Android.VPNs Safe JurisdictionSecurityUnlimited BandwidthComprehensive Server NetworkMulti-loginsStreamingAndroid compatibility24/7 Customer Support.APK File Available✔ ✔ ✔ ✔✔✔✔✔ ✔ ✔✔✔✔ ✔ ✔ ✔✔ ✔✔✔✔ ✔✔✔✔✔✔✔✔ ✔ ✔✔✔ ✔✔ ✔ ✔✔
